CHALLENGES PRIOR TO DDDP

Collect and collate data manually from different sources.

No Standardized format of collecting data and validate data

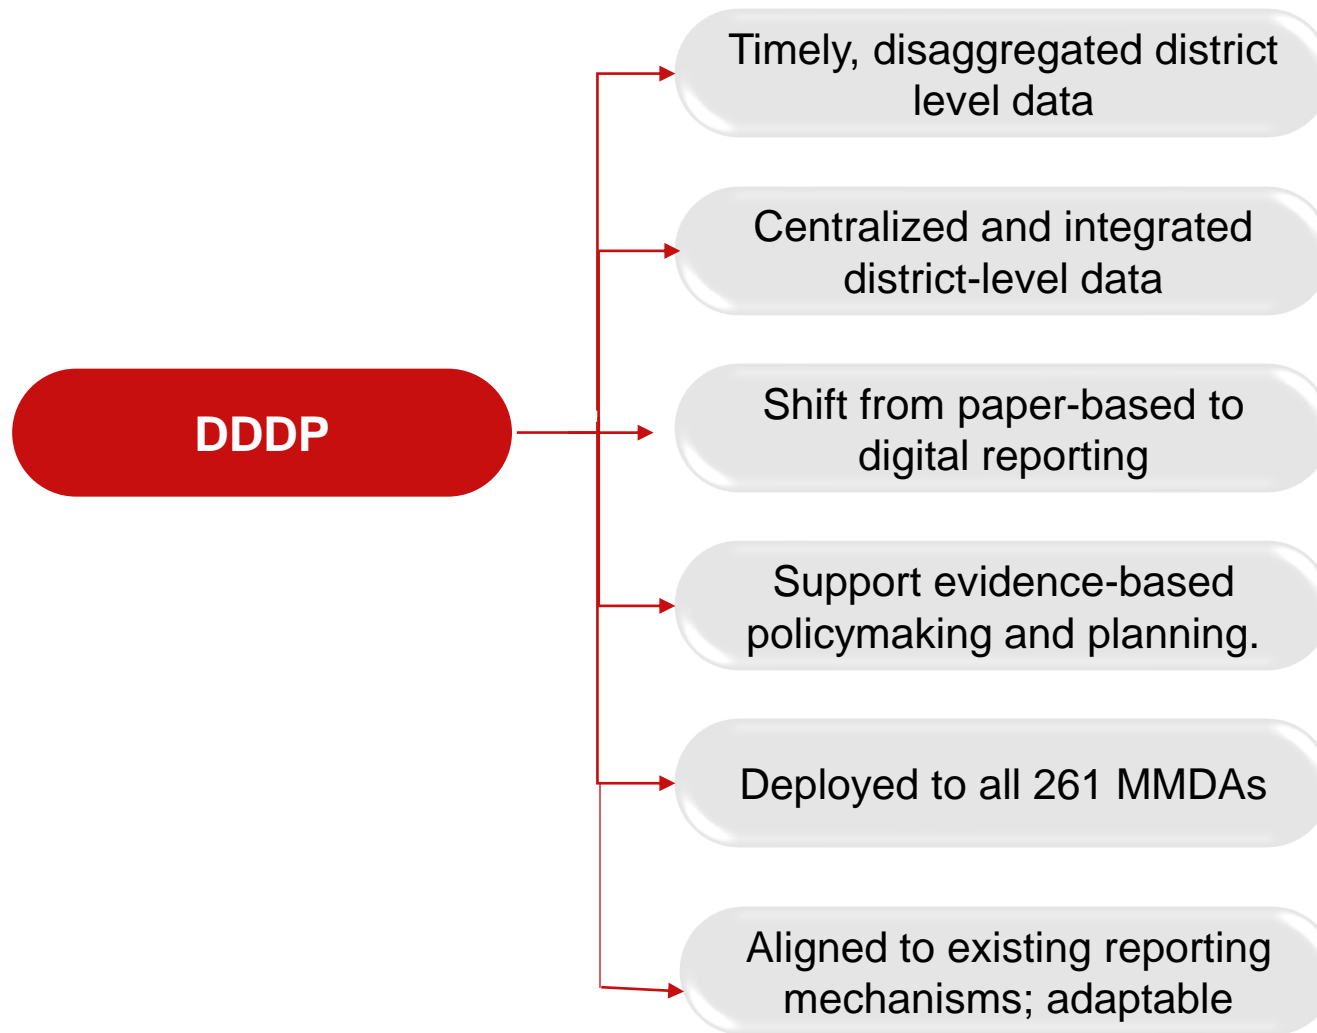

No Centralized database to manage data

Management not able to make timely decision on developmental issues

Silos or legacy system and frequent loss of data

No reliable data source for national development and policy making.

District Development Data Platform: Better Data For Better Decisions

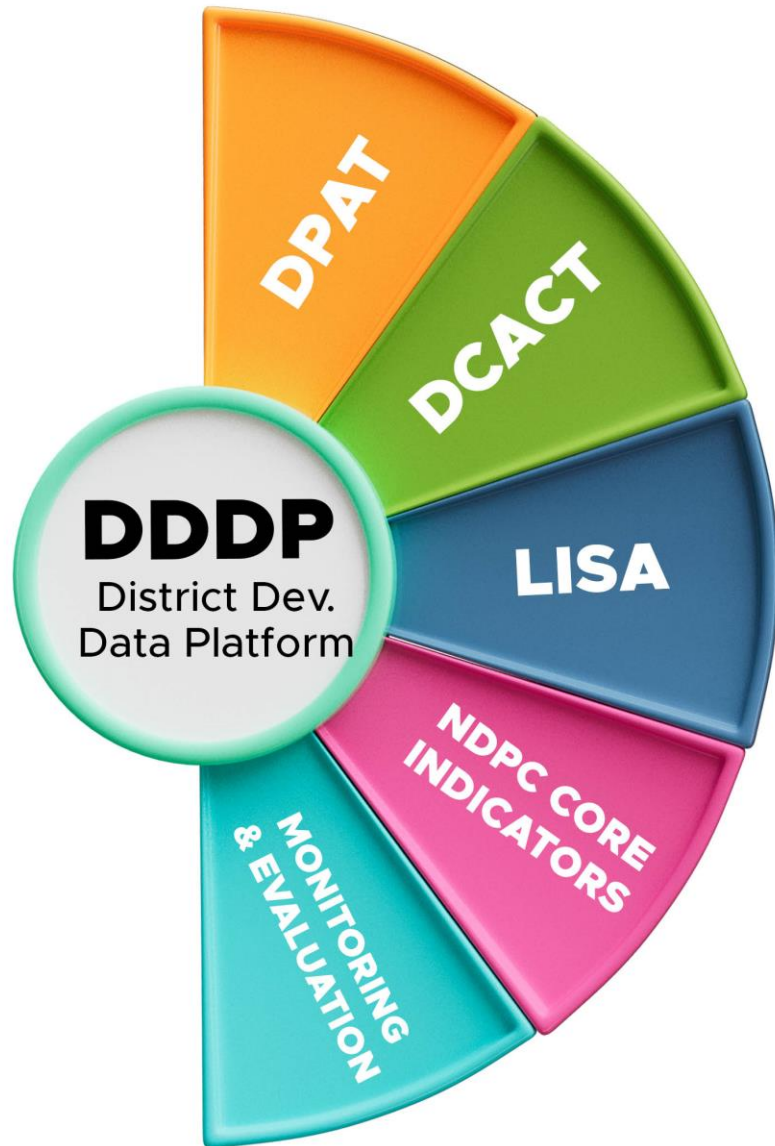

The District Development Data Platform (DDDP) is a Web-Based Data Capturing, Monitoring and Evaluation platform designed to improve on database management and reporting on development plans at the local level as well as track district performance to service delivery.

Rationale:

- To effectively manage and monitor district performance across Ghana
- To focus on service delivery to facilitate collaborative and decisive policy formulation
- To establish integrated data collection and validation processes
